Host introduction About 35 seconds

Ladies and gentlemen, please join us for the AI for All Manifesto from X-lab AI. Its long-term goal is to make AI affordable and useful. The manifesto connects open source and developer creativity through data and evaluation, with digital public goods as a path to practical benefit. We now invite you to watch this ninety-second film, and to consider how you might take part.

Launch remarks About 2 minutes

Friends and colleagues, today we share the AI for All Manifesto as a long-term invitation to act. Our goal is to make AI affordable and useful, giving more people the opportunity to create the future.

From Linux to today's open models, open collaboration has expanded what people can build.

Turning that possibility into real help also requires human creativity, maintained public goods, and applications suited to different languages and settings.

X-lab AI invites you to work with us: open resources that others can reuse, support creation grounded in real needs, and keep public records of progress and limitations. We want contributions to be visible, resource decisions to draw on evidence, and outcomes to be tested in practice.

Your participation can begin with a need, a tool, documentation, a case, or a practical setting.

Please use the launch page to read the manifesto, share feedback and join the work. Let technology create opportunity. Let creativity benefit more people. Thank you.

Closing invitation About 15 seconds

Please scan the code to read the manifesto, download the materials and choose a way to contribute. We look forward to turning this shared vision into action with you.
